

PURSUE. ATTACK. CONQUER.
RAPTOR™ PURSUIT

HEAVY OIL

The Raptor Pursuit was built to soar where other high-performance MOTIV balls could not. The Raptor Pursuit, with the massive symmetrical Affliction V2 core and the incredibly clean Aerial Propulsion pearl coverstock, is a unique combination for when bowlers need a more stable core but still want to see incredible length and speed downlane. This ball was built for bowlers who want big-core performance with a wickedly fast response down-lane motion. The Raptor Pursuit is built for those who set their sights higher!

AFFLICTION™ V2 SYMMETRIC WEIGHT BLOCK

The Affliction V2 core is the strongest symmetrical core used by MOTIV. This is a powerful symmetrical core that gives you unparalleled versatility and continuation through the pins.

15# RG: 2.48 | 15# Diff: .055 | Flare: 5"+

AERIAL PROPULSION™ PEARL REACTIVE

Wrapped around the Affliction V2 core is the Aerial Propulsion Pearl Reactive coverstock. The Propulsion coverstock system has become a proven staple of the MOTIV pearl lineup for generating length and response to friction. The Aerial Propulsion Pearl shell is the second cleanest cover in the Propulsion line behind only the Dark Matter Propulsion shell found on the Nebula. That cleanliness was intentional. We wanted a shell that would stay off the friction in the front, conserve energy, and unleash down lane.

5500 GRIT LSP FINISH

A 5500 Grit LSP finish offers plenty of length through the front of the lane, allowing the ball to retain energy for an explosive down-lane reaction.
