MYTHIC JACKAL™

HEAVY OIL

Meet the Mythic Jackal™, a new kind of hybrid. Our engineering goal with this ball was to create as much angle as possible while still providing true heavy oil performance attributes. So often, shiny asymms are only ideal for moderate conditions so we set out to create a different kind of animal. Now, when high volume patterns begin to transition and you need to create angle, the Mythic Jackal™ with 2:1 hybrid technology delivers exactly what you need.

PREDATOR™ V2 WEIGHT BLOCK

The gold standard for high performance, the Predator™ V2 core has never before been combined with a hybrid cover stock on a worldwide Jackal™ release.

INFUSION™ HV 2:1 SOLID REACTIVE

The Mythic Jackal™ is the first to feature Infusion HV 2:1 Hybrid Reactive cover technology. This means the shell features twice as much pearl as solid cover material. This enables it to create incredible angle down lane without completely sacrificing traction. The 33% load of solid cover gives the Mythic Jackal a strong footprint on the lane in heavy oil while the 67% load of pearl yields a powerful backend motion.

5000 GRIT LSP FINISH

A 5000 Grit LSP finish pairs with this hybrid cover to provide plenty of length through the front of the lane without sacrificing traction when the ball sees friction.
