

SHOCK THERAPY

The new solid purple Venom Shock produces a violent reaction on light to medium oil conditions. It attacks the lane with the proven Gear™ weight block and new cover technology – Turmoil™ MFS (Medium Friction Solid) Reactive, which is a modified version of the more aggressive shell featured on the Covert Revolt. This core and cover combination provides a smooth yet angular backend motion that strikes with devastating continuation.

The Venom Shock has it all – performance, looks, and a great price point. The most shocking thing about this ball may be that you get such outstanding performance at such an affordable price!
