

OUT OF THIS WORLD

ORION NEBULA™

MEDIUM OIL

Introducing the Orion Nebula, the perfect follow-up to the out-of-this-world Nebula. Built to be a step up from the original Nebula, the Orion Nebula brings more traction and control while still maintaining some of the down-lane motion that made the original so impressive. This is not your typical benchmark bowling ball; the Orion Nebula takes control to a new galaxy. New Dynamic Leverage Solid Reactive cover technology comes wrapped around the dual-density Hadron core for a fast but controlled response to friction on medium oil conditions.

HADRON™ SYMMETRIC WEIGHT BLOCK

This dual density design creates a powerful combination of stability and stored energy for drive through the pins. This engine creates explosive motion without becoming unpredictable.

15# RG: 2.50 | 15# Diff: .045 | Flare: 5"+

DYNAMIC LEVERAGE™ SOLID REACTIVE

Dynamic Leverage was developed to give bowlers more control over their trajectory. This new solid reactive coverstock delivers a moderate response to friction, giving the Orion Nebula the ability to adapt as the lane environment changes. This means that the Dynamic Leverage cover can be moderately fast in its response to friction when shined, but with some surface can truly allow the bowler to focus on control. The Orion Nebula was not built to simply follow its predecessor but was built to become the next star in the lineup.

3000 GRIT LSS FINISH

A 3000 Grit LSS finish on the Orion Nebula provides enough traction for midlane read, without sacrificing explosive down lane reaction.
